Paul Farber, Hamilton Cravens : Race and Science: Scientific Challenges to Racism in Modern America before purchasing it in order to gage whether or not it would be worth my time, and all praised Race and Science: Scientific Challenges to Racism in Modern America:

During the course of American history, scientific theories have been used to legitimate racial ideas that in turn have been important in creating and interpreting the law. *Race and Science* collects essays from leading voices in law, history, history of science, botany, and the social sciences, resulting in a rich and comprehensive multidisciplinary exploration of the roots of and the scientific challenges to racial essentialism. The notion that someone's racial identity and characteristics define everything of importance about them has become deeply embedded in American culture, society, and science. These essays illuminate the roots of this belief and present case studies that explore how and why natural and social scientists have challenged these racist views. *Race and Science* will be of interest to historians, social scientists, educators, and scientists, and others interested in racism as a phenomenon in American culture.

About the Author Paul Farber is OSU Distinguished Professor of History of Science Emeritus. He is the author of *Finding Order in Nature: The Naturalist Tradition from Linnaeus to E. O. Wilson* and *The Temptations of Evolutionary Ethics*. Hamilton Cravens is Professor of History at Iowa State University. His publications include nine books, notably *The Triumph of Evolution: The Heredity- Evolution Controversy* and the forthcoming *Imagining the Good Society: The Social Sciences in the American Past and Present*.
