Paul Humann, Ned DeLoach, Les Wilk : Reef Creature Identification: Florida Caribbean Bahamas 3rd Edition (Reef Set) (Reef Set (New World)) before purchasing it in order to gage whether or not it would be worth my time, and all praised Reef Creature Identification: Florida Caribbean Bahamas 3rd Edition (Reef Set) (Reef Set (New World)):

1 of 1 people found the following review helpful. Easy identification for those different critters!By DeniseAs a diver I encounter many different critters. If I see something weird I take a picture of it. When I sit down later to go through all my shots I flip through and find out what it is. This is a great addition to my other id books. Paul Humann takes wonderful pictures that help make identification easy!0 of 0 people found the following review helpful. Just what I was looking for.By Horror movie holicI'm a beginner - novice scuba diver and enjoy underwater photography. I really wanted something that wasn't overly complicated to help me identify various creatures when scuba diving in Jamaica. I bought the series of 3 (Reef Creatures, Coral and Fish) and these were precisely what I wanted. The first few pages have some drawn illustrations to guide you to which class you are looking for and go to that section where there are excellent color photos to help identify the species. Every species listed also has a short blurb to tell you specific identifying features (which can be helpful if the specimen you're identifying was a little varied from the photo), the prevalence in the area, normal dwelling areas (like in coral, near sponges, etc) to be even more specific to help you identify. I've already used this to help me id species from past photographs. They are very comprehensive and easy to use.My only minor problem and is probably more my fault for not looking at the shipping weights, is that they are a tad heavier than expected. I'm going on another dive trip soon and plan on taking them with me and perusing them between dives and they will definitely require that I lighten my luggage. Together all 3 books (spiral bound with plastic cover) weigh about 5-6 lbs. Comparatively considering prices for other guides which usually had complaints of not being easy to use, no color photos, not enough info., I'm still very happy I bought these. I think the value for the money (purchased used - good to very good condition via), was more than excellent. Even knowing the weight, I would definitely buy again.2 of 2 people found the following review helpful. New expanded third edition is greatBy CustomerI have the previous editions of this book and use them extensively. This latest expanded edition is a fantastic reference for those divers who want to know what they are looking at. I prefer the layout of the older editions but assume the greatly increased number of photos necessitated a change for the third edition. Even if you have an older edition and or have been diving for years and "seen it all", you will find this book a useful and valuable reference.For full disclosure, I have contributed many of my photos to this edition.

Reef Creature Identification has been significantly expanded in a new 3rd edition. The popular, user-friendly field guide, covering all major groups of marine invertebrates, has grown to include 900 species beautifully documented with more than 1200 underwater photographs - nearly doubling the total in the previous edition. Les Wilk has joined Paul Humann and Ned DeLoach authoring the comprehensive new edition.

New World Publications has massively updated two of their seminal reference books about Reef Creatures and Reef Coral Identification for Florida, the Caribbean and Bahamas. Both new books have had significant numbers of new species added. Wetpixel Underwater Photography and Videography, November 2013 --Wetpixel Underwater Photography and Videography, November 2013From the PublisherThe most frequently asked question in diving is "What the h--- is that thing?!!!"This is the book with the answers - crabs, lobsters, jellies, worms, shrimp, sponges, mollusks and more - they're all here. 478 color photos illustrate the most common marine invertebrates of the area.From the Inside Flap"Paul Humann and Ned DeLoach's set of marine wildlife guides has become the bible for Caribbean divers. The updated editions, which include many splendid new animals to search for, give everyone even more reason to go diving." -- Stan Waterman, Producer of Films Under the Sea.
