to use as a textbook for my Military Social Work class. Not only is it difficult to find publications with current information, it is difficult to find textbooks that cover all aspects of serving military families. This book is no exception. The text has great statistical data, good personal stories to introduce the chapters, and robust chapters and coverage of some topics (Military Culture, Veterans and Families, Policies and Programs that Support Military Families). But there are some gaps. My students do not need four chapters covering military culture and life. My students do need to understand the ugliness of combat and what military members experience during and after the war zone so they have a frame of reference for their social work practice. The chapters covering the effects of war on service members and families are presented in a very sanitized and academic way. The final chapter, Serving Military Families, is just plain silly, considering the editors state the book is intended for advanced undergraduate and graduate students. 0 of 0 people found the following review helpful. This text introduces readers to the unique culture of military families, their resilience, and the challenges of military life. Personal stories from nearly 70 active duty, reservists, veterans, and their families from all branches and ranks of the military bring their experiences to life. A review of the latest research, theories, policies, and programs better prepares readers for understanding and working with military families. Objectives, key terms, tables, figures, summaries, and exercises, including web based exercises, serve as a chapter review. The book concludes with a glossary. Readers learn about diverse careers within which they can make important differences for families. Engaging vignettes are featured throughout: Voices from the Frontline offer personal accounts of issues faced by actual program leaders, practitioners, researchers, policy makers, service members, veterans, and their families. Spotlight on Research highlights the latest studies on dealing with combat related issues. Best Practices review the optimal strategies used in the field. Tips from the Frontline offer suggestions from experienced personnel. Updated throughout including the latest demographic data, the new edition also features: -New chapter (9) on women service members that addresses the accomplishments and challenges faced by this population including sexual bias and assault, and combat-related psychological disorders. - New chapter (10) on veterans and families looks at veterans by era (e.g. WW2), each era's signature issues and how those impact programs and policies, and challenges veterans may face such as employment, education, and mental and physical health issues. -Two new more comprehensive and cohesive chapters (11 12) review military and civilian programs, policies, and organizations that support military and veteran families. - Additional information on TBI and PTSD, the deployment cycle, stress and resilience, the possible negative effects of military life on families, same-sex couples and their children, and the recent increase in suicides in the military. -More applied cases and exercises that focus on providing services to military families. Intended as a text for advanced undergraduate or graduate courses on military families or as a supplement for courses on the family, marriage and family, stress and coping, or family systems taught in family science, human development, clinical or counseling psychology, sociology, social work, and nursing, this book also appeals to helping professionals who work with military and veteran families.
