A lot of bang for not too many bucks.By Keith BickelPeriod photos, a fairly complete basic history of these 13 ships in 3 subclasses, a listing pictures of most available models accessories, color profiles, more is what you get on 64 pages of stout glossy paper. Not being much of a ship modeler, I can still appreciate the work involved as well as the very nicely done finished products shown here.1 of 1 people found the following review helpful. Great book, but can hardly be considered an in ...By Geir J.Great book, but can hardly be considered an in depth review in the traditional sense, but contains the most appropriate information. But this book is

of great value for model builder and providing the more than just basic information about the class. Great color side views drawings of the cruisers. I would definitely recommend this book for those who don't have the need to know how many rivets were used etc :-)

2 of 2 people found the following review helpful. County Class Crusiers By K.Schneider Les Brown has produced another great book on a single class of ship...The County Class Crusiers built under the Washington Treaty is an excellent book there is a lot of photos tech and drawings packed into 64 pages....For the model maker it is perfect...for the naval historian and excellent reference...

The 'ShipCraft' series provides in-depth information about building and modifying model kits of famous warship types. Lavishly illustrated, each book takes the modeler through a brief history of the subject class, highlighting differences between sister-ships and changes in their appearance over their careers. This includes paint schemes and camouflage, featuring color profiles and highly-detailed line drawings and scale plans. The modeling section reviews the strengths and weaknesses of available kits, lists commercial accessory sets for super-detailing of the ships, and provides hints on modifying and improving the basic kit. This is followed by an extensive photographic gallery of selected high-quality models in a variety of scales, and the book concludes with a section on research references – books, monographs, large-scale plans and relevant websites. This volume covers the British 10,000-ton 'Treaty Cruisers', thirteen of which were built to three slightly varying designs between the wars. With three funnels and a high freeboard, they were impressive ships, and all enjoyed very active wartime careers - three were involved in the Bismarck action and another with the sinking of the Scharnhorst.

This is the latest book in the Ship Craft series and provides in-depth information about building and modifying model kits of famous warship types. The book consists of many line drawings and paint systems together with historic pictures of these warships and an extensive list of model kits. An excellent book for the model maker or naval researcher. - Marine Model magazine
