**Neil Stokes : SU-76 on the Battlefield (World War Two Photobook Series)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised SU-76 on the Battlefield (World War Two Photobook Series):

The SU-76 and SU-76M were the most widely produced Soviet self-propelled artillery pieces of the Second World War, second only to the T-34 tank in terms of production numbers. The SU-76M saw action in all campaigns in the latter years of the war and continued to serve with the Soviet Army and other states long after the war. This book provides a concise yet comprehensive description of the development, production and service of this important series, followed by extensive photographic coverage of the SU-76 and SU-76M in service.

"This is a great book for modelers. The introduction provides a thorough background on the design, development and employment of the SU-76/SU-76M. The selection of pictures provides views of the SU-76/SU-76M in use in various combat settings. It should provide the modeler with a lot of good ideas on building an SU-76/SU-76M." (AMPS) "This is the 12th volume of a series called 'photobook' by Peko. As is proper for what is basically a photo book, it is in landscape format. This allows for some very large photographs, something that both enthusiasts and modelers will appreciate... In all, a very worthwhile volume on this important, but little known Soviet AFV. Highly recommended." (Modeling Madness)
